

CASTELLANA 4WD

Warehouse ladder

It is a special version of Castellana, with 4 wheels diameter 100 mm provided with springs. When the ladder is empty (user not on the ladder) the springs in the wheels raise the ladder a few mm allowing the user to move the ladder simply pushing it in any desired direction.

As soon as the user mounts the ladder, the springs compress allowing both the front and the back rubber feet to touch the ground, firmly blocking and braking the ladder with no need for other devices.

As soon as the user mounts the ladder, also the back wheels compress, allowing the rubber feet to touch the ground firmly blocking the ladder.
